

**DESIGNED FOR
8-SHEET**

**QuickFlex™ THE SINGLE SHEET POSTER INSTALLATION SYSTEM,
DESIGNED TO WORK FOR EVERYONE.**

The most versatile system available, designed to accept a variety of substrates from Polyethylene to PVC Vinyl depending on the length of the contracted showing. Poster finishing is made simple; just cut to size & leave edges unfinished, no hemming or pocketing required. System eliminates the need of posting supplies, and ratchet straps and gripper bars. Maintains the industry standard copy size of 5x11. Available in a retro-fit kit for reusing existing trim or as a complete new trim kit with or without poster panel sections. Designed for round corner or square corner poster panels. The poster can easily be installed from an extension or poster ladder. Spring loaded tensioning lever keeps constant pressure on the cable preventing sagging or wrinkling of the poster through the term of the posting. Durable components make up the system providing the lowest cost of ownership. Posters are stretched behind the trim providing protection from the elements and increasing the total image quality of the ad.
